FAQ-1

I use translator for about 2 years. Now I'm trying to tranlate a subtitle file for a Xvid coded movie. But the movie don't play in translator. It plays in mediaplayers.
So is it a bug or it don't work with xvid codec ?

Respuesta FAQ-1

On my configuration XviD plays ok in ST so this must be some sytem problem of yours. Try reinstalling XviD codec or MediaPlayer, maybe this will help. I cannot assist you any further, because I haven't encountered someone with such a problem before.

FAQ-2

Could this be added to a future build of ST ? I am thinking to MP4, OGM and MKV.

Respuesta FAQ-2

Probably not... The basic rule is if WMP8 plays it, ST can play it as well. If not, bad luck. I have no knowledge of writing my own media player
